

Raw produce as coffee, Cocoa (to make chocolate), rice, sugar, cotton, cashew nuts, corn, flour, oils, milk powder, fresh fruits, wood or metal scrap need to be inspected properly, Visual inspections and random sampling are generally performed at the supplier's premises. The aim of these inspections is to check the quantity, packing and visual quality of goods before delivery according to the client's specifications.

Sampling is done carefully according to high standards methods and the client's protocol.

Laboratory tests are also performed to test for, acidity contents, fat content or pesticides residues.
